Waleed Khan

This programs sorts hex, octal, decimal, binary, and floating point numbers into separate tokens and outputs them. Put quotes around the inputs in order for proper execution.

Example inputs:

"10"

"07"

"0x10"

"10.5e10"

Example Outputs:

Decimal: 10

Octal: 07

Hex: 0x10

Floating-point: 10.5e10
